

Computer Networks LAB (CS3P004)
Spring Semester 2024-25
Lab Sheet 5 Continuation

Name: Borru Vijay Sai
Roll no: 22CS01076

Additional Functionalities:

1) Implemented a timeout function as if there is no messages and no responses sent to a particular client then the server will automatically remove the clients connection from the network.

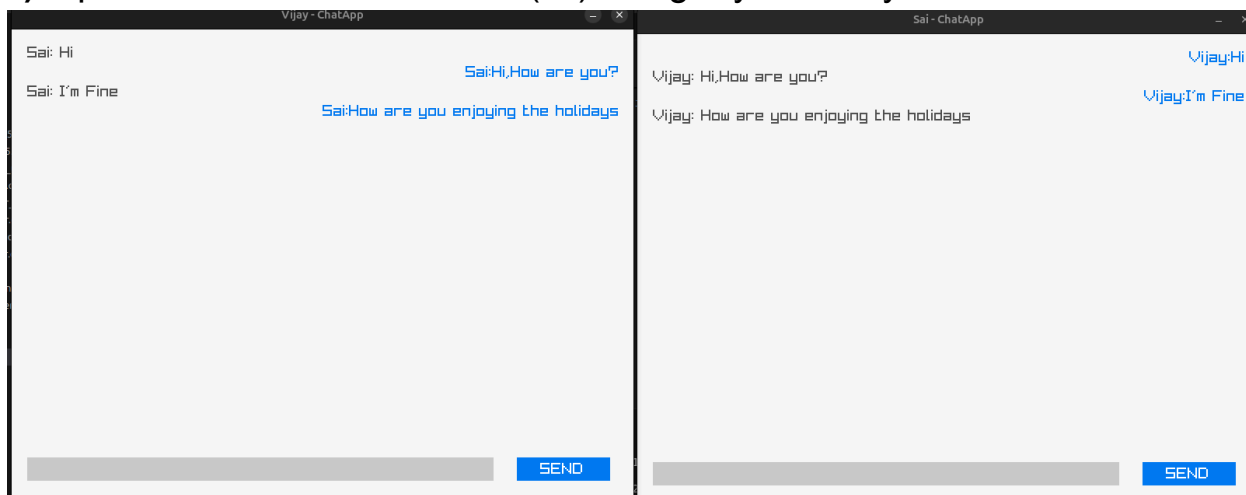

```
Nitin disconnected due to inactivity
sanjay disconnected due to inactivity
^C
```

2) Implemented a new function as to get the list of active users at that time :

```
You: active

[00:02:25] Active Users:
Vijay
Sai
```

3) Implemented a User Interface(UI) using raylib library

We can see above as an interface is been provided by the raylib library . The input or sending msgs are right sided and the left side is receiving messages.

Done:

Final_server.c -> Main server

Final_server_using_select.c -> in this main server used select function call instead of threads.

Final_client.c -> It is the client code which combines both server and receiver.

Final_client_ui.c -> Using raylib visualizing the msgs and the user interface
